Percentage share of skills in 2010

(A)

30

(B) 72 (C)

(D) 60

Answer: **(D)**

- 9. M and N had four children P, Q, R and S. Of them, only P and R were married. They had children X and Y respectively. If Y is a legitimate child of W, which one of the following statement is necessarily FALSE?
 - (A) M is the grandmother of Y
- W is the wife of R (B)

W is the wife of P (C)

(D) R is the father of Y

Answer: **(C)**

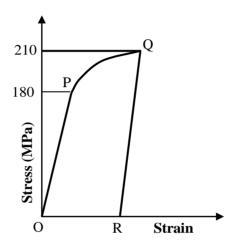

- 10. Congo was named by Europeans. Congo's dictator Mobuto later changed the name of the country and the river to Zaire with the objective of Africanising names of persons and spaces. However, the name Zaire was a Portuguese alteration of Nzadi o Nzere, a local African term meaning 'River that swallows Rivers'. Zaire was the Portuguese name for the Congo river in the 16th and 17 centuries. Which one of the following statements can be inferred from the paragraph above?
 - (A) The term Nzadi o Nzere was of Portuguese origin
 - (B) As a dictator Mobuto ordered the Portuguese to alter the name of the river to Zaire
 - (C) Mobuto's desire to Africanise names was prevented by the Portuguese
 - Mobuto was not entirely successful in Africanising the name of his country

Answer: (D)

MECHANICAL ENGINEERING

Q. No. 1 – 25 Carry One Mark Each

1. Consider the stress-strain curve for an ideal elastic-plastic strain hardening metal as shown in the figure. The metal was loaded in uniaxial tension starting from O.

Upon loading, the stress-strain curve passes through initial yield point at P, and then strain hardens to point Q, where the loading was stopped. From point Q, the specimen was unloaded to point R, where the stress is zero. If the same specimen is reloaded in tension from point R, the value of stress at which the material yields again is _____MPa.

Answer: (210)

2. The length, width and thickness of a steel sample are 400 mm, 410 mm, 40 mm and 20 mm, respectively. Its thickness needs to be uniformly reduced by 2 mm in a single pass by using horizontal slab milling. The milling cutter (diameter: 100 mm, width: 50 mm) has 20 teeth and rotates at 1200 rpm. The feed per tooth is 0.05 mm. The feed direction is along the length of the sample. If the over-travel distance is the same as the approach distance, the approach distance and time taken to complete the required machining task are

- (A) 14mm, 21.4 s
- (B) 21 mm, 39.4 s
- (C) 21 mm, 28.9s
- (D) 14mm, 18.4 s

Answer: (A)

- 3. As per common design practice, the three types of hydraulic turbines, in descending order of flow rate, are
 - (A) Francis, Kaplan, Pleton

(B) Kaplan, Francis, Pelton

(C) Pelton, Kaplan, Francis

(D) Pelton, Francis, Kaplan

Answer: (B)

4. The table presents the demand of a product. By simple three-months moving average method, the demand-forecast of the product for the month of September is

Month	Demand
January	450
February	440
March	460
April	510
May	520
June	495
July	475
August	560

(A) 490

(B) 536.67

(C) 510

(D) 530

Answer: (C)

iliswei. (C)

5. The lengths of a large stock of titanium rods follow a normal distribution with a mean (μ) of 440 mm and a standard deviation (σ) of 1 mm. What is the percentage of rods whose lengths lie between 438 mm and 441 mm?

(A) 86.64%

(B) 68.4%

(C) 99.75%

(D) 81.85%

Answer: (D)

- **6.** During a non-flow thermodynamic process (1-2) executed by a perfect gas, the heat interaction is equal to the work interaction $\left(Q_{l-2}=W_{l-2}\right)$ when the process is
 - Isentropic (A)
- (B) Isothermal
- Polytropic
- (D) Adiabatic

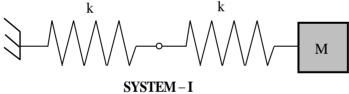

Answer: (B)

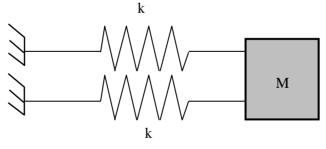

Evaluation of $\int_2^4 x^3 dx$ using a 2-equal-segment trapezoidal rule gives a value of _____. **7.**

Answer: (63)

The natural frequencies corresponding to the spring-mass systems I and II are $\omega_{_{\rm I}}$ and $\omega_{_{\rm II}}$, respectively. 8.

The ratio $\frac{\omega_{\rm I}}{\omega_{\rm II}}$ is

SYSTEM-II

(A)

- (B) 4
- (C) 2

Answer:

9. A solid cube of side 1 m is kept at a room temperature of 32° C. The coefficient of linear thermal expansion of the cube material is 1×10^{-5} /°C and the bulk modulus is 200 GPa. If the cube is constrained all around and heated uniformly to 42° C, then the magnitude of volumetric (mean) stress (in MPa) induced due to heating is _____.

Answer: (60)

10. For a hydro dynamically and thermally fully developed laminar flow through a circular pipe of constant cross-section, the Nusselt number at constant wall heat flux (Nu_q) and that at constant wall temperature (Nu_T) are related as

(A) $Nu_q < Nu_T$

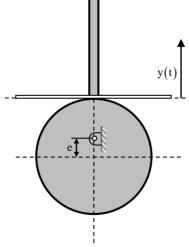

(B) $Nu_q = (Nu_T)^2$

(C) $Nu_q = Nu_T$

(D) $Nu_q > Nu_T$

Answer: (D)

11. A flat-faced follower is driven using a circular eccentric cam rotating at a constant angular velocity ω . At time t = 0, the vertical position of the follower is y(0) = 0, and the system is in the configuration shown below

The vertical position of the follower face, y(t) is given by

(A) $e(1+\cos 2\omega t)$

(B) esinωt

(C) e sin 2\omega t

(D) $e(1-\cos\omega t)$

Answer: (D)

- 12. In a casting process, a vertical channel through which molten metal and flows downward from pouring basin to runner for reaching the mold cavity is called
 - (A) sprue
- (B) pin hole
- (C) riser
- (D) blister

Answer: (A)

13. Air of mass 1 kg, initially at 300K and 10 bar, is allowed to expand isothermally till it reaches a pressure of 1 bar. Assuming air as an ideal gas with gas constant of 0.287 kJ/kg.K, the change in entropy of air (in kJ/kg.K, round offto two decimal places) is ______.

Answer: (0.66)

14. A block of mass 10 kg rests on a horizontal floor. The acceleration due to gravity is 9.81 m/s². The coefficient of static friction between the floor and the block is 0.2.

A horizontal force of 10 N is applied on the block as shown in the figure. The magnitude of force of friction (in N) on the block is _____.

Answer: (10)

15. Consider the matrix $P = \begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 1 \\ 0 & 0 & 1 \end{bmatrix}$

The number of distinct eigenvalues of P is

(A) 0

(B)

- (B) 1
- (C) 3
- (D) 2

Answer:

16. During a high cycle fatigue test, a metallic specimen is subjected to cyclic loading with a mean stress of +140 MPa, and a minimum stress of -70 MPa. The R-ratio (minimum stress to maximum stress) for this cycle loading is _____ (round off to one decimal place).

Answer: (-0.2)

17. A slender rod of length L, diameter d (L >> d) and thermal conductivity k_1 is joined with another rod of identical dimensions, but of thermal conductivity k2, to form a composite cylindrical rod of length 2L. The heat transfer in radial direction and contact resistance are negligible. The effective thermal conductivity of the composite rod is

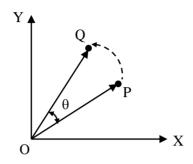

(A) $k_1 + k_2$ (B) $\sqrt{k_1 k_2}$ (C) $\frac{2k_1 k_2}{k_1 + k_2}$ (D) $\frac{k_1 k_2}{k_1 + k_2}$

Answer: **(C)**

18. Consider an ideal vapor compression refrigeration cycle. If the throttling process is replaced by an isentropic expansion process, keeping all the other processes unchanged, which one of the following statements is true for the modified cycle?

- (A) Coefficient of performance is the same as that of the original cycle
- Coefficient of performance is lower than that of the original cycle (B)
- (C) Refrigerating effect is lower than that of the original cycle
- Coefficient of performance is higher than that of the original cycle (D)

Answer: **(D)** 19. The position vector \overrightarrow{OP} of point P(20, 10) is rotated anti-clockwise in X-Y plane by an angle $\theta = 30^{\circ}$ such that point P occupies position Q, as shown in the figure. The coordinates (x, y) of Q are

- (A) (13.40, 22.32)
- (B) (12.32, 18.66)
- (C) (22.32, 8.26)
- (D) (18.66, 12.32)

Answer: (B)

20. A cylindrical rod of diameter 10 mm and length 1.0 m fixed at one end. The other end is twisted by angle of 10° by applying a torque. If the maximum shear strain in the rod is p×10⁻³, then p is equal to _____ (round off to two decimal places).

Answer: (0.8726)

- 21. Which one of the following welding methods provides the highest heat flux (W/mm²)?
 - (A) Plasma are welding

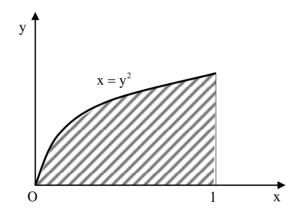

- (B) Tungsten inert gas welding
- (C) Oxy-acetylene gas welding
- (D) Laser beam welding

Answer: (D)

22. Water flows through a pipe with a velocity given by $\vec{V} = \left(\frac{4}{t} + x + y\right)\hat{j}$ m/s, where \hat{j} is the unit vector in the y direction, t(>0) is in seconds, and x and y are in meters. The magnitude of total acceleration at the point (x, y) = (1, 1) at t = 2s is ______ m/s².

Answer: (3)

23. A parabola $x = y^2$ with $0 \le x \le 1$ is shown in the figure. The volume of the solid of rotation obtained by rotating the shaded area by 360° around the x-axis is

- (A) $\frac{\pi}{4}$
- (B) $\frac{\pi}{2}$
- (C) 2π
- (D) π

Answer: (B)

- **24.** A spur gear with 20° full depth teeth is transmitting 20 kW at 200 rad/s. The pitch circle diameter of the gear is 100mm. The magnitude of the force applied on the gear in the radial direction is
 - (A) 1.39 kN
- (B) 2.78 kN
- (C) 0.36 kN
- (D) 0.73 kN

Answer: (D)

- For the equation $\frac{dy}{dx} + 7x^2y = 0$, if y(0) = 3/7, then the value of y(1) is

- (A) $\frac{7}{3}e^{-7/3}$ (B) $\frac{3}{7}e^{-7/3}$ (C) $\frac{3}{7}e^{-3/7}$ (D) $\frac{7}{3}e^{-3/7}$

Answer: (B)

Q. No. 26 – 55 Carry Two Marks Each

26. A cube of side 100 mm is placed at the bottom of an empty container on one of its faces. The density of the material of the cube is 800 kg/m³. Liquid of density 1000 kg/m³ is now poured into the container. The minimum height to which the liquid needs to be poured into the container for the cube to just lift up is ____ mm.

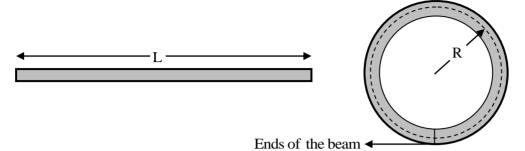

Answer: (80)

A project consists of six activities. The immediate predecessor of each activity and the estimated duration 27. is also provided in the table below:

Activity	Immediate predecessor	Estimated duration (weeks)	
P	-	5	
Q	-	1	
R	Q	2	
S	P, R	4	
Т	Р	6	
U	S,T	3	

If all activities other than S take the estimated amount of time, the maximum duration (in weeks) of the activity S without delaying the completion of the project is _____.

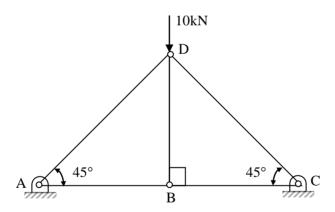

Answer: (6) 28. Consider an elastic straight beam of length $L = 10\pi m$, with square cross-section of side a=5 mm, and Young's modulus E = 200 GPa. This straight beam was bent in such a way that the two ends meet, to form a circle of mean radius R.

Assuming that Euler-Bernoulli beam theory is applicable to this bending problem, the maximum tensile bending stress in the bent beam is _____ MPa.

Answer: (100)

29. A truss is composed of members AB, BC, CD, AD and BD, as shown in the figure. A vertical load of 10 kN is applied at point D. The magnitude of force (in kN) in the member BC is _____.

Answer: (5)

30. A gas is heated in a duct as it flows over a resistance heater. Consider a 101 kW electric heating system. The gas enters the heating section of the duct at 100 kPa and 27°C with a volume flow rate of $15\text{m}^3/\text{s}$. If heat is lost from the gas in the duct to the surroundings at a rate of 51kW, the exit temperature of the gas is (Assume constant pressure, ideal gas, negligible change in kinetic and potential energies and constant specific heat; $C_p = 1 \text{ kJ/kg.K}$; R = 0.5 kJ/kg.K).

(A) 53°C

(B) 32°C

(C) 37°C

(D) 76°C

Answer: (B)

31. A harmonic function is analytic if it satisfies the Laplace equation. If $u(x,y) = 2x^2 - 2y^2 + 4xy$ is a harmonic function, then its conjugate harmonic function v(x,y) is

(A) $-4xy+2y^2-2x^2+constant$

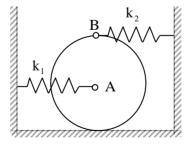

(B) $4xy - 2x^2 + 2y^2 + constant$

(C) $2x^2 - 2y^2 + xy + constant$

(D) $4y^2 - 4xy + constant$

Answer: (B)

32. A uniform thin disk of mass 1 kg and radius 0.1 m is kept on a surface as shown in the figure. A spring of stiffness $k_1 = 400 \text{ N/m}$ is connected to the disk center A and another spring of stiffness $k_2 = 100 \text{ N/m}$ is connected at point B just above point A on the circumference of the disk. Initially, both the springs are unstretched.

Assume pure rolling of the disk. For small disturbance from the equilibrium, the natural frequency of vibration of the system is _____ rad/s (round off to one decimal place).

Answer: (23.1)

33. In ASA system, the side cutting and end cutting edge angles of a sharp turning tool are 45° and 10°, respectively. The feed during cylindrical turning is 0.1 mm/rev. The center line average surface roughness (in µm, round off to one decimal place) of the generated surface is ______.

Answer: (3.747)

34. Consider a prismatic straight beam of length $L = \pi m$, pinned at the two ends as shown in the figure.

The beam has a square cross-section of side p=6mm. The Young's modulus E=200 GPa, and the coefficient of thermal expansion $\alpha=3\times10^{-6}\,\text{K}^{-1}$. The minimum temperature rise required to cause Euler buckling of the beam is ______K.

Answer: (1)

35. The set of equations

$$x + y + z = 1$$

$$ax - ay + 3z = 5$$

$$5x - 3y + az = 6$$

has infinite solutions, if a =

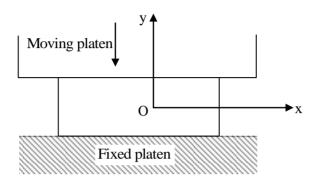

- (A) 4
- (B) -4
- (C) -3
- (D) 3

Answer: (A)

36. In a UTM experiment, a sample of length 100 mm, was loaded in tension until failure. The failure load was 40 kN. The displacement, measured using the cross-head motion, at failure, was 15 mm. The compliance of the UTM is constant and is given by 5×10^{-8} m/N. The strain at failure in the sample is %.

Answer: (13)

37. A plane-strain compression (forging) of a block is shown in the figure. The strain in the z-direction is zero. The yield strength (S_y) in uniaxial tension/compression of the material of the block is 300 MPa and it follows the Tresca (maximum shear stress) criterion. Assume that the entire block has started yielding. At a point where $\sigma_x = 40$ MPa (compressive) and $\tau_{xy} = 0$, the stress component σ_y is

(A) 260 MPa (tensile)

(B) 340 MPa (compressive)

(C) 260 MPa (compressive)

(D) 340 MPa (tensile)

Answer: (B)

38. Match the following sand mold casting defects with their respective causes.

	Defect	Cause			
(P)	Blow hole	1.	Poor collapsibility		
(Q)	Misrun	2.	Mold erosion		
(R)	Hot tearing	3.	Poor permeability		
(S)	Wash	4.	Insufficient fluidity		

Codes:

(A) P-3, Q-4, R-2, S-1

(B) P-4, Q-3, R-1, S-2

(C) P-2, Q-4, R-1, S-3

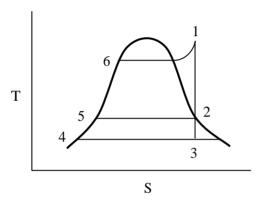

(D) P-3, Q-4, R-1, S-2

Answer: (D)

39. A steam power cycle with regeneration as shown below on the T-s diagram employs a single open feedwater heater for efficiency improvement. The fluids mix with each other in an open feedwater heater. The turbine is isentropic and the input (bleed) to the feedwater heater from the turbine is at state 2 as shown in the figure. Process 3-4 occurs in the condenser. The pump work is negligible. The input to the boiler is at state 5.

The following information is available from the steam tables:

State	1	2	3	4	5	6
Enthalpy (kJ/kg)	3350	2800	2300	175	700	1000

The mass flow rate of steam bled from the turbine as a percentage of the total mass flow rate at the inlet to the turbine at state 1 is _____.

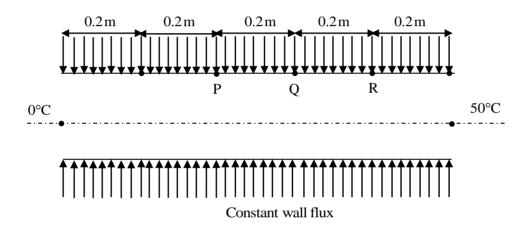

Answer: (20)

- 40. The rotor of turbojet engine of an aircraft has a mass 180 kg and polar moment of inertia 10 kg.m² about the rotor axis. The rotor rotates at a constant speed of 1100 rad/s in the clockwise direction when viewed from the front of the aircraft. The aircraft while flying at a speed of 800 km per hour takes a turn with a radius of 1.5 km to the left. The gyroscopic moment exerted by the rotor on the aircraft structure and the direction of motion of the nose when the aircraft turns, are
 - (A) 1629.6 N.m and the nose goes up
- (B) 1629.6 N.m and the nose goes down
- (C) 162.9 N.m and the nose goes down
- (D) 162.9 N.m and the nose goes up

Answer: (B)

41. The wall of a constant diameter pipe of length 1 m is heated uniformly with flux q" by wrapping a heater coil around it. The flow at the inlet to the pipe is hydrodynamically fully developed. The fluid is incompressible and the flow is assumed to be laminar and steady all through the pipe. The bulk temperature of the fluid is equal to 0°C at the inlet and 50°C at the exit. The wall temperatures are measured at three locations, P, Q and R, as shown in the figure. The flow thermally develops after some distance from the inlet. The following measurements are made:

Point	P	Q	R
Wall Temp (°C)	50	80	90

Among the locations P, Q and R, the flow is thermally developed at:

- (A) P and Q only
- (B) P, Q and R
- (C) R only
- (D) Q and R only

Answer: (D)

42. At a critical point in a component, the state of stress is given as $\sigma_{xx} = 100 \,\text{MPa}$, $\sigma_{yy} = 220 \,\text{MPa}$, $\sigma_{xy} = \sigma_{yx} = 80 \,\text{MPa}$ and all other stress components are zero. The yield strength of the material is 468 MPa. The factor of safety on the basis of maximum shear stress theory is ______ (round off to one decimal place).

Answer: (1.8)

43. A gas turbine with air as the working fluid has an isentropic efficiency of 0.70 when operating at a pressure ratio of 3. Now, the pressure ratio of the turbine is increased to 5, while maintaining the same inlet conditions. Assume air as a perfect gas with specific heat ratio $\gamma = 1.4$. If the specific work output remains the same for both the cases, the isentropic efficiency of the turbine at the pressure ratio of 5 is _____ (round off to two decimal places).

Answer: (0.51)

44. The value of the following definite integral is _____ (round off to three decimal places)

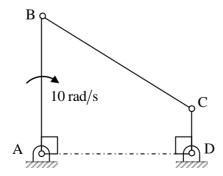

$$\int_{1}^{e} (x \, \ell n \, x) dx$$

Answer: (2.097)

45. Taylor's tool life equation is given by $VT^n = C$, where V is in m/min and T is in min. In a turning operation, two tools X and Y are used. For tool X, n = 0.3 and C = 60 and for tool Y, n = 0.6 and C = 90. Both the tools will have the same tool life for the cutting speed (in m/min, round off to one decimal place) of _____.

Answer: (40.5)

46. In a four bar planar mechanism shown in the figure, AB = 5 cm, AD = 4 cm and DC = 2 cm.

In the configuration shown, both AB and DC are perpendicular to AD. The bar AB rotates with an angular velocity of 10 rad/s. The magnitude of angular velocity (in rad/s) of bar DC at this instant is

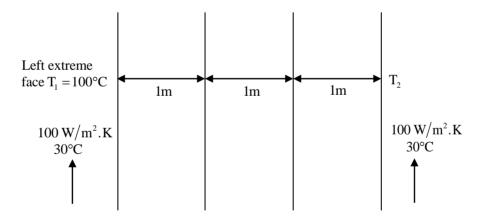

- (A) 25
- (B) 15
- (C) 10
- (D) 0

Answer: (A)

47. If one mole of H_2 gas occupies a rigid container with a capacity of 1000 liters and the temperature is raised from 27°C to 37°C, the change in pressure of the contained gas (round off to two decimal places), assuming ideal gas behavior, is _____ Pa. (R = 8.314 J/mol.K).

Answer: (83.14)

48. Three slabs are joined together as shown in the figure. There is no thermal contact resistance at the interfaces. The center slab experience a non-uniform internal heat generation with an average value equal to 10000 Wm⁻³, while the left and right slabs have no internal heat generation.

All slabs have thickness equal to 1 m and thermal conductivity of each slab is equal to 5 Wm⁻¹ K⁻¹. The two extreme faces are exposed to fluid with heat transfer coefficient 100 Wm⁻²K⁻¹ and bulk temperature 30°C as shown. The heat transfer in the slabs is assumed to be one dimensional and steady, and all properties are constant. If the left extreme face temperature T_1 is measured to be 100°C, the right extreme faced temperature T_2 is _____ °C.

Answer: (60)

49. Five jobs (J₁, J₂, J₃, J₄ and J₅) need to be processed in a factory. Each job can be assigned to any of the five different machines (M₁, M₂, M₃, M₄ and M₅). The time duration taken (in minutes) by the machines for each of the jobs, are given in the table. However, each job is assigned to a specific machine in such a way that the total processing time is minimum. The total processing time is _____ minutes.

	\mathbf{M}_1	M_2	M_3	M_4	M_5
J_1	40	30	50	50	58
J_2	269	38	60	26	38
J_3	40	34	28	24	30
J_4	28	40	40	32	48
J_5	28	32	38	22	44

Answer: (146)

50. In orthogonal turning of a cylindrical tube of wall thickness 5mm, the axial and the tangential cutting forces were measured at 1259 N and 1601 N, respectively. The measured chip thickness after machining was found to be 0.3 mm. The rake angel was 10° and the axial feed was 100 mm/min. The rotational speed of the spindle was 1000 rpm. Assuming the material to be perfectly plastic and Merchant's first solution, the shear strength of the martial is closest to

(A) 722 MPa

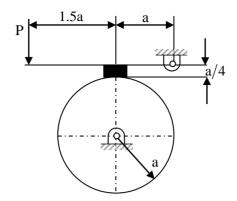

(B) 875 MPa

(C) 200 MPa

(D) 920 MPa

Answer: (A)

51. A single block brake with a short shoe and torque capacity of 250 N-m is shown. The cylindrical brake drum rotates anticlockwise at 100 rpm and the coefficient of friction is 0.25. The value of a, in mm (round off to one decimal place), such that the maximum actuating force P is 2000 N, is ______.

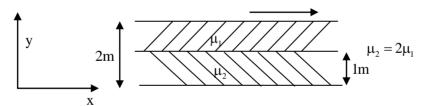

Answer: (212.5)

- 52. A circular shaft having diameter $65.00^{+0.01}_{-0.05}$ mm is manufactured by turning process. A 50 μ m thick coating of TiN is deposited on the shaft Allowed variation in TiN film thickness is $\pm 5\mu$ m. Theminimum hole diameter (in mm) to just provide clearance fit is
 - (A) 65.12
- (B) 64.95
- (C) 65.01
- (D) 65.10

Answer: (A)

Click here to watch video explanation

53. Two immiscible, incompressible, viscous fluids having same densities, but different viscosities are contained between two infinite horizontal parallel plates, 2 m apart as shown below.

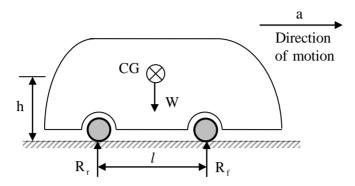

The bottom plate is fixed and the upper plate moves to the right with a constant velocity of 3 m/s. With the assumptions of Newtonian fluid, steady, and fully developed laminar flow with zero pressure gradient in all directions, the momentum equations simplify to

$$\frac{\mathrm{d}^2 \mathbf{u}}{\mathrm{d} \mathbf{y}^2} = 0.$$

If the dynamic viscosity of the lower fluid, μ_2 , is twice that of the upper fluid, μ_1 , then the velocity at the interface (round off to two decimal places) is _____ m/s.

Answer: (1)

54. A car having weight W is moving in the direction as shown in the figure. The centre of gravity (CG) of the car is located at height h from the ground, midway between the front and rear wheels.

The distance between the front and rear wheels is ℓ . The acceleration of the car is a, and acceleration due to gravity is g. The reactions on the front wheels (R_f) and rear wheels (R_r) are given by

$$(A) \qquad R_{_{\rm f}} = R_{_{\rm r}} = \frac{W}{2} + \frac{W}{g} \left(\frac{h}{\ell}\right) a$$

$$(B) \qquad R_{_{\rm f}} = \frac{W}{2} + \frac{W}{g} \bigg(\frac{h}{\ell}\bigg) a; R_{_{\rm f}} = \frac{W}{2} - \frac{W}{g} \bigg(\frac{h}{\ell}\bigg) a$$

(C)
$$R_f = R_r = \frac{W}{2} - \frac{W}{g} \left(\frac{h}{\ell}\right) a$$

(D)
$$R_f = \frac{W}{2} - \frac{W}{g} \left(\frac{h}{g}\right) a; R_r = \frac{W}{2} + \frac{W}{g} \left(\frac{h}{g}\right) a$$

Answer: (D)

55. The variable x takes a value between 0 and 10 with uniform probability distribution. The variable y takes a value between 0 and 20 with uniform probability distribution. The probability of the sum of variables (x + y) being greater than 20 is

- (A) 0.33
- (B) 0.50
- (C) 0.25
- (D) 0

Answer: (C)
