[NEET (Oct.) 2020]

- (a) It is a cross linked polymer.
- (b) It is an addition polymer.
- (c) It is a branched chain polymer.
- (d) It is a linear polymer.

Ans. (a)

Bakelite is a cross linked condensation thermosetting copolymer of phenol and formaldehyde.

02 Which of the following is a natural polymer? [NEET (Sep.) 2020]

- (a) Poly (Butadiene-styrene)

- (c) Poly (Butadiene-acrylonitrile)
- (d) Cis-1, 4-polyisoprene

Ans. (d)

Natural polymer (soft) is an addition homopolymer of isoprene which is a conjugated diene. Isoprene shows 1, 4-addition with themselves to give *cis*-1, 4-polyisoprene or natural rubber.

$$---\stackrel{\leftarrow}{C}H_2 = \stackrel{\leftarrow}{C} = \stackrel{\leftarrow}{C}H_2 = \stackrel{C$$

Natural rubber

All polymers mentioned in options (a), (b) and (c) are synthetic 1,4-addition polymers. Where (a) and (c) are buna-S and buna-N respectively.

- (a) Examples are bakelite and melamine
- (b) They are formed from bi- and tri-functional monomers
- (c) They contain covalent bonds between various linear polymer chains
- (d) They contain strong covalent bonds in their polymer chains

Ans. (d)

Cross-linked or network polymers are formed from bi-functional and tri-functional monomers and contain strong covalent bonds between various linear polymer chains. These are hard, rigid and brittle due to cross-links e.g. bakelite, melamine etc. Thus, option (d) is incorrect.

06 Natural rubber has [NEET 2016, Phase I]
